GANA R&D · Prepared for Charles Laporte Aust · 6 August 2026

Market Access Map

Which markets each proposition can serve today

> **Purpose.** Your six segments describe customer groups but not territories, and that is on us: the information sits in our registration records. This sets out what is registered where, what is in progress, and what cannot yet be offered. The market and distribution proposition needs it most, since the first question any distributor asks is whether they are covered in their own market.

1. Where we can supply today

Territory	Regulator	Active product registrations	Manufacturer status	Can we supply today?
South Korea	MFDS	**25** — 24 export-designated, 1 domestic	Manufacturing licence **No. 4490** GMP **KCL-ABBA-19926** to 3 Mar 2027	**Yes** — export basis
Russia	Roszdravnadzor	**8** — all active	Named as manufacturer on all eight	**Yes**
Brazil	ANVISA	**2** — risk class IV	Named as manufacturer; registration held by local entity	**Yes** — via local registration holder
United Kingdom	MHRA	**1** — Class III	Manufacturer registered **MAN_ID 32678**, updated 11 Apr 2026	**Contract manufacture only** — brand owned by the market-authorisation holder
European Union	EUDAMED	—	Manufacturer registered **SRN KR-MF-000037221**, active	**Not yet** — CE certificate expired 27 May 2024; renewal required before devices may be placed on the EU market
United States	FDA	none	not registered	**No**

Total: **36 active product registrations across five jurisdictions**, with GANA R&D named as manufacturer on every one.

2. By manufacturing depth

	Korea	Russia	Brazil	UK	EU
Surface dermal fillers — HA, PLLA, PCL, calcium	**21**	**7**	**2**	contract	CE renewal
Tissue hydrogel and foam wound dressings	**3**	**1**	—	—	CE renewal
Cell and gene AAV vectors, plasmid, protein	Phase 1 facility completed August 2025 — cGMP certification targeted 2026				
Other — suture	1	—	—	—	—

3. Russia — Roszdravnadzor

#	Registration	Product	Chemistry	Date	Depth
1	P3H 2021/13973	GANA X / V	PLLA	8 Apr 2021	Surface *(indefinite term)*
2	P3H 2021/14277	GANA HA (A/B/C)	hyaluronic acid	7 May 2021	Surface
3	P3H 2022/18121	GANA HA Body	hyaluronic acid	29 Aug 2022	Surface
4	**P3H 2024/22431**	**GANA PATCH**	hydrogel wound dressing	18 Apr 2024	**Tissue**
5	P3H 2024/22440	GANA BOOSTER	hyaluronic acid	23 Apr 2024	Surface
6	P3H 2024/22794	GANA PH	PLLA + HA	30 May 2024	Surface
7	P3H 2025/26343	GANA Filler X	PCL + HA	19 Nov 2025	Surface

8	P3H 2025/26344	GANA CH	calcium + HA	19 Nov 2025	Surface

> **Four separate chemistries under a single manufacturer** — hyaluronic acid, PLLA, PCL and calcium. That range appears when a company formulates and fills across chemical families. It does not appear when a company buys one ingredient and resells it.

Description note. The registration holders are local representatives and GANA R&D appears in the manufacturer field. The accurate phrase is **"named as manufacturer"**, not "registered in our name". For a manufacturing proposition this is the stronger claim in any case.

A note on the identifiers. "P3H" is Cyrillic, not Latin — it is the abbreviation for Roszdravnadzor and reads *R-Z-N*. The searchable element is the numeric portion, for example **2024/22431**, at roszdravnadzor.gov.ru. The same applies to the Korean licence numbers below: the Hangul prefix forms part of the official identifier.

4. South Korea — MFDS

4.1 Wound dressings — tissue depth

Licence	Product	Class	Scope	Granted
제인 **25-4996**	**KORAVIE SHIELD** — hydrogel	2	Export	27 Oct 2025
제인 **20-4997**	**GANA PATCH** — hydrogel	2	**Domestic** — to 9 Nov 2030	10 Nov 2020
제인 15-4197	GANA PATCH / GANA DERM — foam	2	Export	15 Oct 2015

4.2 KoraVie products manufactured by GANA R&D

Licence	Product	Class	Depth	Granted
제허 **25-518**	**KoraVie DP+** — tissue-repair material	4	Surface	28 Jul 2025
제인 **25-4996**	**KoraVie Shield** — hydrogel wound dressing	2	Tissue	27 Oct 2025

> Both licences were granted in 2025, and GANA R&D is the named manufacturer on each. **Neither appears on koravie.info nor on ganarnd.co.kr.** This is a documented manufacturing relationship spanning two depths that neither company is currently showing to anyone.

4.3 Surface — dermal fillers and tissue-repair materials

21 active licences, class 4. Several are umbrella licences covering large product families. Representative entries:

Licence	Product	Granted
제허 15-1662	**GANA HA** — covering ART AQUA and 21 further products	10 Dec 2015
제허 14-652	**GANA FILL** — covering DIAL LINE and 23 further products	18 Mar 2014

제허 23-426	Filler X	17 Mar 2023
제허 22-751	BELVISO CaHA V-Line	8 Nov 2022
제허 22-305	GANA PN	16 May 2022
제허 25-737	GANA AH8	4 Nov 2025
제허 25-709 / 25-710	MESOTEN H / REVACOLL	22 Oct 2025

> **On the export designation.** 24 of the 25 Korean licences are export-designated. This is not a limitation to be explained away — it is documentary evidence of sustained export activity, which is precisely what a prospective distributor wants to see before signing.

Licence prefixes. 제허 (*je-heo*) denotes a manufacturing approval; 제인 (*je-in*) denotes a manufacturing certification. The Korean characters form part of the official identifier and are required when searching the MFDS database.

5. Manufacturer credentials

Item	Identifier	Status
MFDS manufacturing licence	**제 4490 호**	Active since 5 March 2014
MFDS GMP conformity	**KCL-ABBA-19926**	**Valid 4 March 2024 – 3 March 2027**
MHRA manufacturer registration	**MAN_ID 32678**	Updated 11 April 2026
EUDAMED actor registration	**KR-MF-000037221**	Manufacturer — active

Manufacturing site: 555 Dunchon-daero, Jungwon-gu, Seongnam-si 13215, Republic of Korea — floors 801, 802, 905 and 1106. The viral vector facility operates from the same site.

6. In progress, and not yet available

Item	Status	Effect on the propositions

EU CE certificate	Expired 27 May 2024; renewal required	EU territorial distribution cannot be offered until renewed. Manufacturer registration remains active, so the pathway is open rather than closed
cGMP — viral vector	Facility completed August 2025; certification targeted 2026	Clinical supply cannot be contracted until certified. Process development and engineering batches are available now
US FDA device registration	Not registered	US device distribution cannot be offered
ISO 13485 / 22716	Certificates not located	Not cited anywhere

7. How these should be described

A short set of conventions, so that anything said to a partner survives the check that follows it.

Avoid	Use instead
“Registered in our name” (Russia)	**“Named as manufacturer”** — the registration holders are local representatives
“FDA approved” · “FDA registered”	Nothing — no US device registration exists
“Russia FDA” · “KFDA”	**Roszdravnadzor** · **MFDS** — the first does not exist, the second was renamed in 2013
CE mark or ISO badges	Nothing, until renewed and located
The UK Class III device brand name	**“Manufacturer registered with MHRA, MAN_ID 32678”** — the device brand belongs to the market-authorisation holder and cannot be named until the manufacturing contract has been reviewed
Claims of in-house raw material synthesis	**“Combinations”** and “formulation across chemical families” — the registrations evidence manufacturing scope, not ingredient synthesis

Compiled from direct searches of the Roszdravnadzor, MFDS, MHRA, EUDAMED and ANVISA public databases, 22 July 2026, refreshed 6 August 2026. Every figure above carries a public lookup path and can be verified independently.
