One Narrative, Every Layer

Depth maps what we make. Verification is what we hand each customer at that depth. ***Same move at every layer: not a story about trust, but trust they can look up.***

DEPTH	LAYER	WHO ASKS	WHAT THEY WANT TO VERIFY	WHAT WE HAND OVER
	SURFACE *fillers · dermal materials*	Distributors & clinics	*Is the registration valid, and still current?*	**The registration number + a lookup link. Current GMP.**
	TISSUE *wound care*	Regulators & medical distribution	*Is it registered in the market I sell into?*	**The registration on record (Roszdravnadzor · MFDS).**
deeper	**CELL & GENE** *AAV · plasmid*	CDMO clients & investors	*How fast, how much capacity — and is it real?*	**Pipeline simulator · build record · cGMP-2026 roadmap · single-owner speed.**

The fear changes with the layer. The evidence changes with the layer. **The form never changes — we hand over what can be checked.** That single form, running through every depth, is the one narrative that holds all of it together.
