Manufacturing Depth

One axis, three layers — not what benefit we deliver, but how deep into biology we manufacture.

DEPTH	LAYER	WHAT WE MANUFACTURE	MAKER · PROOF
	SURFACE *on / just under the skin*	Fillers · dermal materials HA · PLLA · PCL · PDRN	**GANA R&D** Registered · GMP-certified
	TISSUE *into the tissue*	Bio-cellulose wound dressing	**GANA R&D** Registered
deeper	**CELL & GENE** *the cellular level*	AAV vector · plasmid recombinant protein	**Dr.Park CDMO** Plant built · cGMP 2026 target

EXPLANATORY NOTE *Why this axis — and how to read it.*

Not what benefit we deliver, but how deep into biology we manufacture — one axis that is true of all six companies, provable, and impossible for a brand to copy.

The cell & gene layer is stated in the honest tense: the plant is built, cGMP certification is the 2026 target.

1 True of all six companies.

Every affiliate manufactures something. The benefit axis had to force a gene-therapy plant under “anti-aging”; depth forces nothing.

2 Every layer maps to proof.

Surface → a registration number. Tissue → a registration. Cell → a built plant. Each layer points to a document, not an adjective — defensible in due diligence.

3 A ladder only a maker can climb.

Deeper = harder and more capital-intensive to make. A company that outsources production cannot place itself anywhere on this axis.

Why not benefit, category, or market.

Listed side by side we look like a buffet. “Levels of anti-aging” is a benefit claim we cannot prove and every competitor also makes. Category leaves us six unrelated firms; market splits the group in two.

Depth is not hierarchy.

The cell layer is not above the filler layer and not more important — it manufactures at a different biological depth. The layers darken with difficulty, not status. No affiliate is demoted; each owns its layer.

One axis, three uses.

The same surface → tissue → cell becomes the navigation of the website and the order in which a buyer meets us. One idea organizes the story, the site, and the sales conversation.

Three layers, getting deeper and darker — one manufacturer working across a range that no brand can fake. That is manufacturing depth.
